### 1350 VA OF AC POWER IN A 3.5" HIGH CHASSIS

In the BL1350 Series you'll find the quality features you expect from Behlman. Fully adjustable voltage and frequency, low output THD, high efficiency, plus excellent line and load regulation. There's also a unique overload protection system that folds back voltage to maintain rated current without output waveform distortion. Units are supplied with analog remote control and available with optional RS-232 and IEEE-488 remote control interfaces. Other options include

**INPUT** 115 or 230VAC, 1 $\phi$ , +/-10%, 47-63Hz

### PROTECTIVE CIRCUITS

**Input:** Fast-acting main circuit breaker  
**Constant Current:** Overload automatically causes voltage fold-back to provide maximum current without distorting output waveform

extended frequency range out to 1000 Hz and motor test option, which has the capability to soft-start motors, pumps and compressors, thereby eliminating the need for high-power devices.

Small size, quiet operation and high efficiency make the BL1350 Series ideal for industrial product testing, precision avionic test, power conversion, ATE, bulk power and motor generator replacement.

**Short Circuit:** Short-circuit overload electronically latches output open to protect load... power restored by recycling circuit breaker  
**Thermal:** Internal temperature sensor prevents heat damage

### CONTROLS / INDICATORS

**OPTION MT: MOTOR TEST** includes all of the specifications of the standard BL Series plus the following features to meet the requirements for motor testing:

- Unique overload protection prevents output distortion
- "Soft Start" allows starting motors in "locked rotor" condition by folding back the voltage and slowly increasing it as the motor starts to accelerate
- Capable of starting motors, which normally requires 140 Amps locked rotor starting currents
- Capable of supplying a running current up to 14 Amps at 50% duty cycle.
